

1

I already know one endangered species that interests me!

For the pitch

1. Note the **endangerment level/red list category** of the species.
2. Note the **places where the species occurs** and where it is endangered or threatened.
3. Note down other **information** you can already find out about the species in the lists (e.g. causes of endangerment, responsibility, protection measures, population trend...).
4. Think about which **other topics** are particularly important for your research and read about them accordingly!

For example, have special protective policy measures been taken?

Are special threat constellations of importance or is there a prominent public discourse on the species?

2

I would like to select an animal species from the list compiled for the project day.

For the pitch

1. Note the **endangerment level/red list category** of the species.
2. Note the **places where the species occurs** and where it is endangered or threatened.
3. Note down **further information** that you can already find out about the species in the lists (e.g. causes of endangerment, responsibility, protection measures, population trend...).
4. Think about which **other topics** are particularly important for your research and read up on them accordingly!

For example, have special protective measures been taken?

Are special threat constellations of importance or is there a prominent public discourse on the species?

3

I would like to select an animal species
from the IUCN Red List

For the pitch

1. Note the **endangerment level/red list category** of the species.
2. Note the **places where the species occurs** and where it is endangered or threatened.
3. Note down **other information** you can already find out **about the species** in the lists (e.g. causes of endangerment, responsibility, protection measures, population trend...).
4. Think about which **other topics** are particularly important for your research and read up on them accordingly!

For example, have special protective measures been taken?

Are special threat constellations of importance or is there a prominent public discourse on the species?

4

I would like to select an animal species from one of the red lists of vertebrates

For the pitch

1. Note the **endangerment level/red list category** of the species.
2. Note the **occurrence of the species** and where it is endangered or threatened.
3. Note down **other information** you can already find out about the species in the lists (e.g. causes of endangerment, responsibility, protection measures, population trend...).
4. Think about which **other topics are particularly important** for your research and read up on them accordingly!

For example, have special protective measures been taken?

Are special threat constellations of importance or is there a prominent public discourse on the species?
